variables: consumption and income. The rise in all variables and the corresponding rise in the tax and housing costs will raise both the horizontal and vertical intercepts of the indifference curve. Since the demand is not fixed,

mean is only determined up to an arbitrary constant. We resolve this ambiguity by giving a single person value

Source: a cross-sectional survey of 1,000 residents of the national's capital, the capital city of the state, and the capital city of the state.
